

Dear AP Physics 2 Parent or Guardian,

Welcome to the sixth six weeks of AP Physics 2. Please continue to encourage your student to attend tutorials, complete homework and study for upcoming tests.

During the final six weeks of AP Physics 2 we will be reviewing for the AP Physics 2 exam. We will be reviewing all of the topics from this year to best prepare your student for success on the AP Physics 2 Exam. We will also have tutorials and study sessions to help your student to prepare. Please encourage your student to attend the study sessions and to work as many free response questions as possible. The AP Physics 2 AP Exam is scheduled for May 13, 2022.

You can expect that your student will have homework on a nightly basis. Please encourage your student to attend tutorials so that your student can find continued success in AP Physics 2. Your student should be reviewing material every evening and studying well before the evening of the test.

I have several goals for the students in AP Physics: (1) take and pass the AP Physics 2 exam, (2) develop critical thinking skills, (3) design their own lab for a specific physics area and (4) solve real-life problems. We will continue to work toward these goals in the last six weeks.

Please contact me at any time. You may send an e-mail, phone, or schedule a time for a conference.

Sincerely,

Eagle Mountain-Saginaw ISD AP Physics 2 Team
