

Dear AP Environmental Science Parent or Guardian,

Welcome to the third six weeks of AP Environmental Science. Please continue to encourage your student to attend tutorials, complete homework and study for upcoming tests.

During the third six weeks we will be studying the following:

- Tragedy of the Commons
- Sustainability
- Land Management
- Pest Management
- Impacts of Agriculture, Mining, and Urbanization
- Aquaculture
- Ecological Footprints
- The Green Revolution
- Energy Resources and Consumption

Students are expected to complete and turn in homework on time via Canvas, or as otherwise instructed. Students are encouraged to participate, ask questions and be involved in the learning processes in the classroom. Being academically successful is determined by both attendance and participation in class. Please encourage your student to review material each day and to attend tutorials so that they can find success in AP Environmental Science.

The goal for AP Environmental Science students is to take and pass the AP exam, develop critical thinking skills, solve real world problems and gain an overall understanding of the environment and its actions. The AP Environmental Science exam is Friday, May 14, 2021. We will continue building toward your child's success on the exam throughout the school year.

I look forward to working together to make this a great year!

Sincerely,

Eagle Mountain-Saginaw ISD AP Environmental Science Team
