

Dear Environmental Systems Parent/Guardian,

Welcome to the sixth six weeks of environmental science. Please continue to encourage your student to attend tutorials, complete homework and study for upcoming tests. We will be learning about energy and the following topics will be covered during the sixth six weeks.

- Mining
- Mineral Resources
- Nonrenewable Energy
- Renewable Energy
- Waste
- Human Impact

We are excited to wrap up the year make by continuing to use learner inquiry-based activities and projects, Canvas, on-line book sources and real-world applications of the targeted topics. Students will continue to practice critical thinking skills, safe scientific practices, how to plan and implement scientific design and to communicate their findings.

Students are expected to complete and turn in homework on time via Canvas, myhrw.com, or as otherwise instructed. Students are encouraged to participate, ask questions and be involved in their learning processes in the classroom. Academic success will be determined by both attendance and participation in class. Please encourage your child to be active and responsible in keeping up with their work and checking Skyward for grades. Please see the tutorial schedule on the school website.

We hope that your child has enjoyed environmental systems this year and hope they will be able to use this knowledge as the move forward.

Sincerely,

Eagle Mountain Saginaw ISD Environmental Systems Teachers
