

# Why you should take AP Psychology!

## Class is Fun

While AP Psychology is not an 'easy' class it is a fun and interesting one. We play with Lego, Play-doh and puzzles. We challenge your taste buds and adjust your perception of the world. All while learning.

## Learn About Yourself

AP Psychology is one class where everything you learn relates to you. Taking AP Psych gives you the best opportunity to get to know yourself better while earning college credit.

## Learn to Think! Blow your Mind!

Like all AP courses you will develop your skills as a critical thinker. AP Psych also has the edge in that it teaches you how you learn, how to study and how to cope with stress. You will uncover the mysteries of the mind and our behavior and gain a greater understanding behind everything that happens in your world.

## Career Prep (Especially Medicine)

Being able to understand yourself and others better will help you to be able to deal with colleagues and clients in any job. Medicine in particular is giving more emphasis to psychology. The MCAT now gives equal attention to psychology and the behavioral sciences as it does biology and biochemistry.
